

Your link to a clear patient overview

Philips IntelliBridge EC10 device interfacing module

In every clinical environment, it helps to have a clear and combined picture of overall patient status at a glance. The Philips IntelliBridge EC10 module simplifies it all, acquiring real-time information from up to four bedside devices – mechanical ventilators, anesthesia machines, and multi-parameter measurement devices – for display on Philips IntelliVue patient monitors. Data collected include physiologic parameters, waveforms, device settings, and alarms.

Key advantages

- Clearly presents important information from as many as four bedside devices
- Combines data from a variety of manufacturers' bedside devices
- Offers built-in flexibility by storing device-specific settings

PHILIPS
sense and simplicity

Integrates critical data for efficient workflow

The IntelliBridge EC10 module centralizes critical data on the patient monitor, to help improve workflow. Any medical device supported by the IntelliBridge EC10 module including the OpenInterface Protocol can be connected with appropriate software and cabling.

IntelliBridge EC10 clearly displays up to four waves and six numerics on the patient monitor main screen, as well as comprehensive alarm identification and transmission, and complete information in the IntelliBridge EC10 task window.

Provides interfaces for many devices

IntelliBridge EC10 is available in two interface alternatives to help you integrate data from your bedside devices with Philips patient monitors:

- Dedicated interface
- OpenInterface Protocol

IntelliBridge EC10 provides dedicated interfaces to help you synthesize data from a variety of bedside devices with Philips IntelliVue patient monitors.

Through the OpenInterface Protocol, development of the device driver is shared between Philips and the bedside device manufacturer. One part of the driver is integrated in the IntelliBridge EC10 module and the other is built into the device itself.

Offers built-in flexibility

Multiple IntelliBridge EC10 modules can be used with a single Philips IntelliVue monitor to integrate data from numerous devices simultaneously. Device-specific settings are stored inside the module so that they can be reconnected after transport without repeating setup. Plus IntelliBridge EC10 can be easily switched among devices within the hospital department.

Clearly presents important information

Philips IntelliBridge EC10 displays data from external devices maintaining a clear, easy-to-read screen:

- Type and name of device
- Three choices of wave scale
- Up to 80 numerics shown in the IntelliBridge EC10 task window (depending on the connected device)
- Alarm status
- Current device mode (e.g. ventilation mode: CPAP or PSV)

Your link to exceptional care

- Easily upgradeable to interface additional supported devices as they become available
- Auto-detect function (plug-and-play solution) reduces installation time and costs
- Bi-directional communication of non-medical data (depending of the connected external device)
- Multiple modules can be used simultaneously, allowing interfacing of numerous devices
- Comprehensive alarm identification
- Allows simultaneous connection of VueLink and IntelliBridge EC10 modules to the same monitor
- Easy to learn, easy to set up, easy to use, and easy to support

IntelliBridge EC10 acquires and clearly displays data from a range of bedside devices, including ventilators, multi-parameter measurement devices, and anesthesia machines.

Compatibility

The IntelliBridge EC10 module collects data and integrates it with other key parameters on these Philips IntelliVue patient monitors:

- Dedicated interfaces:
IntelliVue MP40-MP90, MX600-MX800 rev. G.0 and above
- OpenInterface Protocol:
IntelliVue MP40-MP90, MX600-MX800 rev. H.0 and above

Please ask your sales representative for details on compatibility.
